Activity 2 Case Study

Map the reporting boundary and value chain

Real use case: Singtel Group

Situation

Build an entity and value-chain boundary that does not hide significant impacts. The learner works only from the cited public report and the controlled teaching dataset; company-specific numbers must not be invented.

Evidence provided

Singtel Sustainability Report 2025, entity register and value-chain worksheet

Discussion and analysis tasks

1. List controlled entities and reporting locations.

2. Reconcile the list to the financial reporting scope.

3. Map upstream, own-operation and downstream activities.

4. Place actual and potential impacts on the map.

5. Document exclusions, evidence gaps and restatement triggers.

Deliverable and acceptance

Boundary register and value-chain impact map

Every entity and impact has an inclusion decision, rationale, owner and evidence source.
