Activity 7 Case Study

Calculate environmental GRI metrics

Real use case: Singapore manufacturing data pack

Situation

Calculate energy, Scope 1/2 GHG, water and waste metrics with transparent boundaries and factors. The learner works only from the cited public report and the controlled teaching dataset; company-specific numbers must not be invented.

Evidence provided

Meter, fuel, water and waste CSV files with factor register

Discussion and analysis tasks

1. Validate units, periods and site coverage.

2. Convert energy to GJ and calculate emissions as activity x factor.

3. Reconcile water withdrawal, discharge and consumption.

4. Classify waste by composition and destination.

5. Publish absolute and intensity metrics with assumptions.

Deliverable and acceptance

Controlled KPI workbook and four disclosure tables

Recalculation matches reported values; units, factors, boundaries and denominators are disclosed.
