Activity 10 Case Study

Proofread, assure and submit the report

Real use case: Board release simulation

Situation

Execute numeric, content, approval and publication controls on a near-final report. The learner works only from the cited public report and the controlled teaching dataset; company-specific numbers must not be invented.

Evidence provided

Near-final report, content index, issue log and approval checklist

Discussion and analysis tasks

1. Cross-foot tables and reconcile repeated figures.

2. Validate units, dates, entity names, codes, links and omissions.

3. Close critical findings and document remaining limitations.

4. Bind the approved version to Board sign-off and checksum.

5. Run post-release link, filename and channel-consistency checks.

Deliverable and acceptance

Closed issue log, approval record and submission inventory

Zero open critical findings; the approved hash matches every released copy and every content-index link resolves.
